

NIV Set Up Guide for Neonates <3Kg

(Suitable for up to 10Kg but Respireo setup recommended >3Kg)

STEP 1

Equipment: F&P paediatric vent tubing with clear pressure line + adaptors (in circuit packaging)
Pink Exp valve. CPAP nasal tubing.
Infant head gear mask + hat.

STEP 2

Insert expiratory valve & ventilator tubing as for invasive set up. Insert clear pressure line onto **BLUE** inspiratory port as shown.

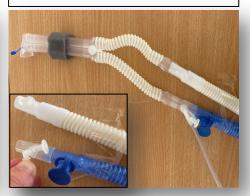

STEP 3

Remove dual limb connector at patient end & add the small clear adaptor (in circuit packaging) to the patient end of the **BLUE** inspiratory limb of the circuit.

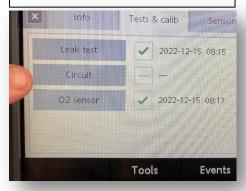

STEP 4

Attach the end of the clear pressure line to the port on this adaptor. Attach CPAP nasal tubing to the dual limbs (orientation not important)

STEP 5

Select Neonatal & weight. Mode - select nCPAP & adjust settings as desired. N.B. <u>AFTER SELECTING</u> nCPAP perform pre-op check. Perform circuit calibration.

STEP 6

Use nasal sizing guide to select mask. Use head circumference to choose hat. Insert mask onto CPAP tubing and apply system to infant head.

STEP 7

In nCPAP & nCPAP-PC modes, there is no apnoea and no 'circuit disconnection' alarms because the flow sensor is not used. This warning will remain on the screen.

STEP 8

Tempus Respiratory alarms must be turned on. In Main menu (bottom right) → medical parameter settings. → resp settings → Monitoring is green
